

## **Forecast Management Rel 8.12**

**Duration:** 1 Day

### **What you will learn**

This course provides hands-on instruction on how to generate short-term demand forecasts to drive your requirements planning. You will learn how to create both detail and summary level forecasts based on historical sales data and analyze the results. JD Edwards EnterpriseOne Forecast Management provides you with a deeper understanding of how to reduce inventory carrying costs by increasing forecast accuracy. You will learn to identify the forecast methods and measurements, create detail forecasts, import and export forecasts, create forecasts in currency, run forecast simulation, and use planning bills to generate forecasts.
